Shoulder - \$79.95

Vest - \$79.95

Magnum Tactical Supply produces the widest variety of Taser holster options offered in today's market. From belt versions to shoulder holsters we've got you covered. Many agencies have been faced with the dilemma of how to add one more thing to an officer's already over-crowded duty belt. Most have been forced to leave something off until now. With the growing number of agencies using Tasers, we set out to provide departments with multiple holster options that not only meet their needs, but exceed them. All of our holster versions shown are available for both the X26 and M26 models of Taser Conductive Energy Weapons Systems.

All our standard models are foam padded dual layer 1000 denier Cordura nylon holsters with dual spare cartridge holders. A reliable 3/4" Fire Fighter helmet style buckle is used to secure the weapon and is adjustable. This style buckle has extended tabs for better disengagement even with gloves on. We do not use a traditional thumb break because it can easily be popped open during a struggle with a suspect. The use of the quick release buckle adds an extra layer of security as well as an additional level of recognition separating it from a standard duty holster. With very little practice an officer can become extremely proficient in drawing the weapon.

** See the bottom of page two for some close-up details of our holster's special features **

We offer **free** (return shipping excluded) **30-day test and evaluations** of our holsters. In order to request a T&E unit you must be in a position or acting on behalf of a person within your agency who is responsible for evaluating equipment. Please fax your request on department letterhead to our office. Please include your name and all of your contact information as well as a UPS ship-to address. Please include which version you want to test. See item # listing for correct versions. Our fax number is (770) 534-1578 Attention: Customer Service.

Check in with us often as we are always adding new designs and making improvements to our products. If you or your agency is in need of a style not shown here please contact our design department and we can convert your idea into a finished product. Thank you for taking the time to review our products.

Belt Mounted Version

Our standard belt holster comes with dual spare cartridge holders. The unique belt mounting system is a feature that makes this holster special. Our standard belt model incorporates a stainless steel backer plate with slots that allow for up to 30 degrees of rotation.

The standard belt mount holster comes with a heavy-duty molded Kydex clip that can allow the officer to place holster onto portions of the belt that are doubled over and twice as thick.

A narrower clip is available for officers who only place the holster on the duty belt's single layer portion. The clip has a Velcro catch strap at the bottom that can be undone to allow the holster to be removed from the duty belt and then re-attached. As with all of our holsters, you do not have to strip the duty belt down to get our holster on.

Additional Standard Features:

A simple, yet highly functional webbing slot and webbing/snap closure system secure the spare cartridges to the holster. One of the benefits of this unique feature is that it allows officers to easily remove the spare cartridge even if they have gloves on. Dual spare cartridge carriers are standard on all of our holsters unless otherwise stated; however, custom holsters can be ordered without spare cartridge holders. We also include a special plastic buckle on the cartridge straps to capture the barbs in the event of an accidental static discharge.

In order to help ensure reliability of the Taser weapon system, protection must be provided to the blast door area of any holster. That's why we developed a special molded Kydex insert that not only protects the blast door from damage, but also provides the holster with a rigid spine system on both sides. In addition, this spine is curved to help reduce the possibility of accidental disengagement of the cartridge when drawing the weapon.

Extended tabs on buckle allow the user to un-fasten the weapon even with gloves on. The use of a quick release buckle instead of a traditional thumb break adds an additional level of security to the holster.

Molded Kydex forms both the spine of the holster as well as the base to protect the blast door of the loaded cartridge.

The plastic buckle on top of the cartridge assists in protecting the blast door as well as capturing the probes in the event of an accidental static discharge of the cartridges.

Thigh Rig Version

The thigh rig holster attaches to the duty belt via a one inch quick release buckle that works similar to a belt keeper. The quick release buckle allows officers to keep the female portion of the clip on their duty belt (additional clips can be ordered for other officers). This allows for quick on/off of the holster or as some call it, "hot-swapping" and takes up only 1" of space on the duty belt. The holster can be adjusted so that the butt of the Taser handle is just below the officer's duty belt or adjusted down to the mid-thigh area. In addition, an extra-long drop strap can be ordered for officers who want the holster to ride even lower. The system utilizes a single leg strap consisting of a 1-1/2" webbing and elastic combination that is connected to a single adjustable quick release buckle. Another nice feature of this holster is the molded Kydex backer that allows the holster to "hug" an officer's leg. This holster has all the same features found in our regular models including the dual spare cartridge holders.

Thigh Rig Features:

Multi-Position slots allow the holster to be fitted to the officer. An extra long version is available for officers with long legs.

Heavy duty elastic section as part of the thigh strap to allow for muscle flex of the leg without loosening the strap.

Molded Kydex backer helps keep the holster securely positioned on the thigh.

Additional quick release belt keepers can be ordered for switching from one officer to another or switching from one gear setup to another.

Paddle Version

The paddle holster is based around our standard dual cartridge holster with a small custom Kydex mounting plate combined with a Kydex paddle from Edge Works Holsters G-Code line. Due to the way the paddle attaches to the holster it can only be offered in a vertical position (no forward tilt).

Vest Mounted Version

Military MOLLE/PAL modular webbing version

Our vest mounted systems are configured to work with all industry standard modular vest systems on the market today. The base is our standard dual cartridge holster with different backers. A special heavy duty Kydex backer plate allows for up to 22 degrees of fixed rotation providing an easier cross-draw. Choose from Military MOLLE/PAL, 2" on center snap and Velcro or the two inch webbing modular vest similar to the BTS system. All are designed for easy on/off applications. The Military MOLLE/PAL and BTS versions can also be adapted to be used on a belt if needed. If your agency purchases a different style vest all you have to change is the backer plate to the appropriate version for the new style vest. Please contact us if you need a custom vest version not listed here.

Snap/Velcro version

Removable modular webbing backer version allows for rapid on/off of the holster.

Two inch (BTS) modular webbing version.

Shoulder Version

This rig is fully adjustable to fit most any officer and is very comfortable to wear. A special upper shoulder component spreads the weight across the top of the shoulder and gives a solid tie-in for the elastic cross-over strap. A removable lower strap attaches to the bottom of the holster and connects via a belt keeper to the officer's belt. This helps to keep the rig securely in place. Our shoulder holster comes standard with a single spare cartridge carrier (picture does not show spare cartridge carrier) as well as all other features found on our standard versions.

Now comes stock with a single cartridge carrier. Shown is the non-cartridge version
